**CITY OF MADISONVILLE, KY
ORDINANCE O-2019-19**

**AN ORDINANCE AMENDING CHAPTER 53 OF THE CITY OF MADISONVILLE CODE OF
ORDINANCES RELATING TO ILLICIT DISCHARGES AND CONNECTIONS**

BE IT ORDAINED BY THE CITY OF MADISONVILLE, KY, AS FOLLOWS:

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MADISONVILLE, KENTUCKY AS FOLLOWS:

Chapter 53 of the City of Madisonville Code of Ordinances is hereby amended as follows:

§ 53.01 PURPOSE; INTENT.

The purpose of this chapter is to provide for the health, safety, and general welfare of the citizens of Madisonville through the regulation of non-stormwater discharges to the ~~[storm drainage system]~~ municipal separate storm sewer system to the maximum extent practicable as required by federal and state law. This ordinance establishes methods for controlling the introduction of pollutants into the municipal separate storm sewer system (MS4) in order to comply with requirements of the national pollutant discharge elimination system (NPDES) permit process. The objectives of this chapter are:

§53.02 DEFINITIONS.

ILLICIT CONNECTIONS. Any drain or conveyance, whether on the surface or subsurface, which allows an illegal discharge to enter the ~~[storm drainage system]~~ municipal separate storm sewer system including but not limited to any conveyances which allow any non-stormwater discharge including sewage, process wastewater, and wash water to enter the ~~[storm drainage system]~~ municipal separate storm sewer system and any connections to the ~~[storm drainage system]~~ municipal separate storm sewer system from indoor drains and sinks, regardless of whether said drain or connection had been previously allowed, permitted, or approved by the city.

NON-STORMWATER DISCHARGE. Any discharge to the ~~[storm drainage system]~~ municipal separate storm sewer system that is not composed entirely of stormwater.

~~[STORM DRAINAGE SYSTEM.]~~ **MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4).** Publicly-owned facilities by which stormwater is collected and/or conveyed, including but not limited to any roads with drainage systems, municipal streets, gutters, curbs, inlets, piped storm drains, pumping facilities, retention and detention basins, natural and human-made or altered drainage channels, reservoirs, and other drainage structures.

§ 53.03 APPLICABILITY.

This chapter shall apply to all water entering the ~~[storm drain system]~~ municipal separate storm sewer system generated on any developed and undeveloped lands unless explicitly exempted by the city.

§ 53.06 DISCHARGE PROHIBITIONS.

(A) No person shall discharge or cause to be discharged into the municipal ~~[storm drain system]~~ separate storm sewer system or watercourses any materials, including but not limited to pollutants or waters containing any pollutants that cause or contribute to a violation of applicable water quality standards, other than stormwater.

(B) The commencement, conduct or continuance of any illegal discharge to the ~~[storm drain system]~~ municipal separate storm sewer system is prohibited except as described as follows:

(4) The prohibition shall not apply to any non-stormwater discharge permitted under an NPDES permit, waiver, or waste discharge order issued to the discharger and administered under the authority of the Federal Environmental Protection Agency, provided that the discharger is in full compliance with all requirements of the permit, waiver, or order and other applicable laws and regulations, and provided that written approval has been granted for any discharge to the ~~[storm drain system]~~ municipal separate storm sewer system.

(C) Prohibition of Illicit Connections.

(1) The construction, use, maintenance or continued existence of illicit connections to the ~~[storm drain system]~~ municipal separate storm sewer is prohibited.

§ 53.10 REQUIREMENT TO PREVENT, CONTROL, AND REDUCE STORMWATER POLLUTANTS BY USE OF BEST MANAGEMENT PRACTICES.

The city will identify best management practices for any activity, operation, or facility which may cause or contribute to pollution or contamination of stormwater, the ~~[storm drain system]~~ municipal separate storm sewer system, or waters of the U.S. The owner or operator of a commercial or industrial establishment shall provide, at their own expense, reasonable protection from accidental discharge of prohibited materials or other wastes into the municipal ~~[storm drain system]~~ separate storm sewer system or watercourses through the use of these structural and non-structural BMPs. Further, any person responsible for a property or premise, which is, or may be, the source of an illicit discharge, may be required to implement, at that person's expense, additional structural and non-structural BMPs to prevent the further discharge of pollutants to the municipal separate ~~[storm drain system]~~ municipal separate storm sewer system. Compliance with all terms and conditions of a valid NPDES permit authorizing the discharge of stormwater associated with industrial activity, to the extent practicable, shall be deemed compliance with the provisions of this section. These BMPs shall be part of a BMP plan as necessary for compliance with requirements of the NPDES permit.

§ 53.12 NOTIFICATION OF SPILLS.

Notwithstanding other requirements of law, as soon as any person responsible for a facility or operation, or responsible for emergency response for a facility or operation has information of any known or suspected release of materials which are resulting or may result in illegal discharges or pollutants discharging into stormwater, the ~~[storm drain system]~~ municipal separate storm sewer system, or water of the U.S., that person shall take all necessary steps to ensure the discovery, containment, and cleanup of such release. In the event of such a release of hazardous materials, that person shall immediately notify emergency response agencies of the occurrence via emergency dispatch services. In the event of a release of non-hazardous materials, that person shall notify the city in person or by phone or facsimile no later than the next business day. Notifications in person or by phone shall be confirmed by written notice addressed and mailed to the city within three (3) business days of the phone notice. If the discharge of

prohibited materials emanates from a commercial or industrial establishment, the owner or operator of such establishment shall also retain an on-site written record of the discharge and the actions taken to prevent its recurrence. Such records shall be retained for at least three (3) years.

The foregoing Ordinance is read to and presented to a regular meeting of the City Council of Madisonville, Kentucky, for first reading on the 2nd day of December, 2019 and the second reading on the 16th day of December, 2019. Motion was made by , seconded by , that the Ordinance be adopted as the law of the City of Madisonville, Kentucky, to be effective upon publication, as required by law.

Upon vote being taken thereon, the votes were cast as follows:

It appearing that the Councilmembers voted the Mayor announced that the Motion was and that the above Ordinance would be published as required by law and would be effective as a new Ordinance of the City of Madisonville, Kentucky, immediately upon publication thereof, unless otherwise stated.

Dated 16th day of December, 2019

City of Madisonville, KY

ATTEST:

City of Madisonville, KY

**CITY OF MADISONVILLE, KY
ORDINANCE O-2019-20**

**AN ORDINANCE CREATING CHAPTER 54 OF THE CITY OF MADISONVILLE CODE OF
ORDINANCES RELATING TO STORMWATER CONVEYANCE, MANAGEMENT &
QUALITY**

BE IT ORDAINED BY THE CITY OF MADISONVILLE, KY, AS FOLLOWS:

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MADISONVILLE, KENTUCKY AS FOLLOWS:

WHEREAS, this Ordinance is being enacted pursuant to mandates imposed by the Federal Clean Water Act (33 U.S.C. §1251 et seq. as may be amended) (“CWA”), the National Pollution Discharge Elimination System (33 U.S.C. §1342 as may be amended) (“NPDES”), and the Kentucky Pollutant Discharge Elimination System (401 KAR 5:050 to 401 KAR 5:080 as may be amended) in particular those parts that require local governments to comply with water pollution control requirements.

NOW THEREFORE be it ordained by the City Council of the City of Madisonville as follows:

ARTICLE I. STORMWATER CONVEYANCE, MANAGEMENT, AND QUALITY

Sec. I. Purpose and scope of article.

Proper stormwater management and good water quality are vital in promoting the health, safety and general welfare of the public. It is the intent of this ordinance to minimize the dangers of flooding to life and property; to protect local water quality; to maintain the integrity of stream channels; and that runoff controls be provided as land areas are developed or redeveloped. The design criteria for stormwater conveyance and water quality structures are outlined in this ordinance.

Sec. II. Definitions.

For the purpose of this ordinance, the following definitions shall apply unless the context clearly indicates or requires a different meaning.

80th Percentile Rainfall Event. The rainfall event, based on historical rainfall records, that represents an event that is equal to or greater than 80 percent of the rainfall events that would be expected to occur in a typical year. Based on an analysis of precipitation records, it has been determined that for the City of Madisonville, this event corresponds to the runoff volume from a 0.61 inch rainfall event.

Best Management Practices or BMPs. Schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the Commonwealth. BMPs also include treatment requirements, operating procedures, and practices to control stormwater runoff.

City plan review staff. The City Engineer and/or other designated officials.

Controlled release structure. A facility constructed to regulate the volume of stormwater runoff that is conveyed during a specific length of time.

Conveyance structures. Water-carrying devices or improvements such as channels, ditches, storm sewers, culverts, inlets, and the like.

Detention or retention. Restraining the rate of stormwater runoff with some natural or manmade devices.

Developed. Conditions after construction or other manmade change to improved or unimproved land, including, but not limited to, buildings or other structures, mining, dredging, filling, grading, paving, excavation, or drilling operations.

Excess stormwater. The calculated runoff produced under a natural or pre-developed condition versus the calculated runoff produced under an altered or post-developed condition, or that portion of stormwater runoff which exceeds the capacity of the storm sewers or natural drainage channels serving a specific watershed.

Green Infrastructure. An adaptable term used to describe an array of products, technologies, and practices that use natural systems - or engineered systems that mimic natural processes - to enhance overall environmental quality and provide utility services. As a general principal, Green Infrastructure techniques use soils and vegetation infiltrate, evapotranspire, and/or recycle stormwater runoff. When used as components of a stormwater management system, Green Infrastructure practices such as green roofs, porous pavement, rain gardens, and vegetated swales can produce a variety of environmental benefits. In addition to effectively retaining and infiltrating rainfall, these technologies can simultaneously help filter air pollutants, reduce energy demands, mitigate urban heat islands, and sequester carbon while also providing communities with aesthetic and natural resource benefits.

High Quality Waters or HQW. Those "Waters of the Commonwealth" that have been categorized by the Kentucky Division of Water as high quality pursuant to the requirements of 401 KAR 10:030, Section 1(3).

Impaired Waters or IW. Those "Waters of the Commonwealth" that have been categorized by the Kentucky Division of Water as impaired for applicable designated uses and have been identified pursuant to 33 U.S.C. 1315 (b) and listed in the most recent 305 (b) report.

Impervious surface. Asphalt, concrete or any other surface which does not allow measurable infiltration of stormwater.

"Kentucky Pollutant Discharge Elimination System" or "KPDES" means the Kentucky program for issuing, modifying, revoking and reissuing, revoking, monitoring and enforcing permits to discharge, and imposing and enforcing pretreatment requirements.

KPDES SMS4 permit means the general permit issued by the Kentucky Division of Water (KDOW) that authorizes small Municipal Separate Storm Sewer Systems (SMS4) to discharge stormwater runoff from a small Municipal Separate Storm Sewer System (MS4) to the receiving waters of the Commonwealth in accordance with effluent limitations, monitoring requirements, and other conditions set forth in the permit authorizing the MS4 to discharge under the Kentucky Pollutant Discharge Elimination System.

Land disturbance activity or Land disturbing activity is any clearing, grubbing, grading, excavating, filling, or other alteration of the earth's surface where natural or manmade ground cover is destroyed. Land disturbance activity does not include the following:

- (1) Minor land disturbance activities including, but not limited to, activities specific to underground utility repairs, replacement of existing utilities, home gardens, minor repairs, and maintenance work.
- (2) Installation of fence, sign, telephone, and electric poles and other kinds of posts or poles.
- (3) Emergency work to protect life, limb, or property and emergency repairs.

Larger common plan of development or sale means a contiguous area where multiple separate and distinct construction activities are planned to occur at different times on different schedules under one plan, e.g., a housing development of 5 1/4-acre lots.

MS4 is an acronym for a “municipal separate storm sewer system.”

Municipal Separate Storm Sewer System means a conveyance, or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, and storm drains) owned or operated by a state, city, town, county, district, association, or other public body (created by or pursuant to state law) having jurisdiction over disposal of sewage, industrial water, stormwater, or other wastes, that discharges to waters of the United States;

- i. designed or used for collecting or conveying stormwater;
- ii. which is not a combined sewer; and
- iii. which is not part of a Publically Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

SMS4 is an acronym for a “small municipal separate storm sewer system.”

Natural drainage. Water which flows by gravity in channels formed by the surface topography of the earth prior to changes made by the efforts of humans.

NPDES is an acronym for “National Pollutant Discharge Elimination System,” the effluent permitting program for point source discharges that is administered by the United States Environmental Protection Agency (USEPA).

Off-site. External to the boundary of a development.

On-site. Internal to the boundary of a development.

Point discharge. Release of stormwater at a specific location.

Runoff. Rainfall excess after natural losses from infiltration, evaporation, transportation or incidental poundage.

Stormwater. Stormwater runoff, snowmelt runoff, surface runoff and drainage.

Stormwater runoff release rate. The rate at which stormwater runoff is released from dominant to servient land.

Stormwater storage area. An area designed to temporarily accumulate excess stormwater.

Swale. Surface-type conveyance for stormwater, usually designated to carry incidental, localized runoff.

TMDL. Is an acronym for “Total Maximum Daily Load”, a federally mandated program for impaired waters of the Commonwealth to determine the maximum assimilative capacity of a water for a specified pollutant and to allocate allowable pollutant loads to sources in the watershed.

Waters of the Commonwealth. Means and includes any and all rivers, streams, creeks, lakes, ponds, impounding reservoirs, springs, wells, marshes, and all other bodies of surface or underground water, natural or artificial, situated wholly or partly within or bordering upon the Commonwealth or within its jurisdiction.

Waters of the United States. As defined by the Clean Water Act, applies only to surface waters, rivers, lakes, estuaries, coastal waters and wetlands. Not all surface waters are legally “Waters of the United States”. Generally those waters include the following:

- a. All interstate waters
- b. Intrastate waters used in interstate and/or foreign commerce
- c. Tributaries of the above
- d. Territorial seas at the cyclical high tide mark, and
- e. Wetlands adjacent to all of the above.

Water-Quality Control Structure. The structures (e.g. grass swales, filter strips, infiltration basins, detention ponds, stormwater wetlands, natural filtration areas, sand filters, and rain gardens, etc.), used to slow runoff, promote infiltration, and reduce sediments and other pollutants in stormwater runoff.

Water Quality Runoff Volume (WQv). The stormwater volume to be treated through a water quality control structure based on the surface runoff produced by an 80th percentile rainfall event.

Sec. III. Stormwater conveyance, management, and water quality facilities required.

The requirements in this Ordinance shall apply to:

- (1) All land-disturbing activities and all development or redevelopment activities that disturb an area greater than or equal to one acre.
- (2) Sites that are smaller than one acre shall also be covered by these regulations if they are a part of a larger common plan of development or sale.
- (3) Stormwater management facilities will be required for any nonresidential development for which the area paved and under roof is equal to or greater than 10,000 square feet

These regulations shall apply to land-disturbing activities within the jurisdictional boundaries of the City of Madisonville designated by the Kentucky Division of Water for coverage under the KPDES SMS4 permit.

Unless included in exemptions listed in section V.(6) or a waiver granted, all development occurring within the City and subject to this article shall provide for properly sized stormwater conveyance and water quality facilities and shall contain on-site, or provide off-site, stormwater management facilities capable of controlling peak discharge rates for selected design storms to at or less than pre-developed conditions, and water quality control structures capable of managing the stormwater runoff quality produced from an 80th percentile rainfall event under post-construction conditions.

The use of other methods of controlling peak discharge rates and pollutant removal, such as bio-retention swales, infiltration ditches, hydrodynamic separators, and created wetlands may be required by the city, in its sole discretion, for new and redevelopment projects that are subject to the land development requirements of this article. Additionally, the city will promote conservation measures such as buffer strips and greenways as acceptable techniques toward the protection and improvement of local waterways.

Sec. IV. Stormwater conveyance facilities and structures design criteria.

The following criteria shall control when designing stormwater conveyance facilities and water quality control structures:

(1) *Open channels and roadside ditches.* The design storm for the design of open channels and roadside ditches shall be a storm with a recurrence frequency of ten years. The time of concentration for open channel and roadside ditches shall be calculated with a minimum of 10 minutes. In all cases, the 100-year discharge elevation must be checked to ensure that adjacent structures do not suffer flood damage.

(2) *Storm sewers and inlets.* The design storm for the design of storm sewers and inlets shall be the ten-year storm. Storm sewers and inlets shall be checked under 25-year storm loading conditions for ponding limits and ensure the system does not surcharge out of any inlets creating potential structure hazards. The ponding limit for streets with curb and gutter shall be an eight-foot spread measured from gutter to driving lane. Spread calculations shall be based on the design for the ten year storm with a minimum intensity of 4 inches per hour. Pipes should be sized based upon the actual time of concentration. The minimum time of concentration used should be no less than ten minutes.

(3) *Driveway entrance pipes and cross drains.* The design storm for the design of driveway entrance pipes and cross drains shall be the ten-year storm. The duration of the design storm shall be assumed to be equal to the calculated time of concentration. The minimum time of concentration shall be assumed to be ten minutes. Entrance pipes and cross drains shall be checked under 25-year storm conditions to ensure against overtopping of roadways and flood damage to affected areas. Situations requiring pipes larger than 36 inches shall be designed using the culvert criteria in subsection (4) below. Minimum pipe size shall be 12 inches except that driveway entrance pipe may be 10 inches with prior approval by the City Engineer.

(4) *Culverts.* The design storm for the calculation of runoff for culvert design shall be the 25-year storm. The duration of the design storm shall be assumed to be equal to the calculated time of concentration. The recommended check storm is the 100-year storm. The maximum headwater under 100-year storm conditions should not be allowed to overtop roads or increase the flooding potential in the affected areas. Headwater for the 10-year discharge should not exceed 1.2 times the structure rise. Downstream channel must receive appropriate protection or energy dissipation if the design outlet discharge would cause erosive conditions. Traffic safety must be considered in the design of culvert end treatments. This may

include extending the culvert beyond the right-of-way limits, installing catch basins to intercept roadside swales, and installing guardrails. Designs must conform to meet the requirements of the agency responsible for road maintenance and safety. Follow method as described in the Kentucky Transportation Cabinet Drainage Guidance Manual.

(5) *Erosion control.* Plans for stormwater conveyance systems shall include the applicable provisions identified under Chapter 160, Erosion Prevention and Sediment Control.

(6) *Design certification.* Design of all stormwater conveyance, management and quality facilities shall be prepared and stamped by a licensed professional engineer (Kentucky registration required). Design methods shall be in accordance with the Kentucky Department of Highways' Manual of Instructions for Drainage Design, latest edition and City of Madisonville Standards Guidance for Development.

Sec. V. Stormwater management facilities design criteria.

As a minimum, the following criteria shall be followed when designing a stormwater management facilities and control structures:

(1) *Design storm.* Water quantity controls shall be implemented so that post-development peak discharges for three design storms are no more than the pre-development peak discharge. The 1-year, 2-year, 10-year, 25-year, and 100-year 24-hour duration storm events must be analyzed for any proposed construction and no increase in discharge rate from the pre-developed site must take place. Additionally, the 100-year event must be analyzed to ensure no adverse impacts on other properties occur. In the event a development is upstream of a structure located in a special flood hazard area as defined by FEMA FIRM Maps adopted by the City, the post development run off rates shall be reduced from the pre-development run off rate by ten percent (10%).

For those areas of development and re-development that result in a new or expanded discharge from the MS4 to high-quality waters, the Design Engineer must perform a critical storm analysis by considering multiple durations (1-hour, 3-hour, 6-hour, 12-hour, and 24-hour) for different return intervals (1-year, 2-year, 10-year, 25-year and 100-year), to establish the worst case scenario for the given circumstance under consideration. Engineering judgement may be used in some cases to make determinations and will be coordinated with the City Engineer.

(2) *Emergency spillways.* The emergency spillway shall be sized to accommodate a flow equal to the design overflow of the 100-year storm post-development discharge, assuming all other outlets are completely blocked, without overtopping the dam. Discharge must be conveyed to a public outlet of sufficient capacity. Erosion protection must be provided for the spillway and receiving stream and energy dissipation must be employed.

(3) *Design calculations.* Design calculations submitted must include, but are not limited to, the following:

- a. Contributing drainage area, in acres show pre-development and post-development watershed areas and how they differ.
- b. A breakdown of surface type for pre-development and post-development conditions (such as grassed, paved, roofed, and the like) as the weighted curve numbers are calculated.

- c. Stage-storage curve for the proposed stormwater management facility.
 - d. Stage-discharge curve for the outlet structure of the proposed stormwater management facility.
 - e. Inflow and outflow hydrographs for pre-development and post-development conditions.
 - f. Emergency spillway design calculations.
 - g. Embankment design criteria as it relates to slope stability and compaction requirements during construction.
- (4) *Gradient.* All detention basins having a vegetative cover shall be designed, constructed, and maintained equal to or greater than one percent throughout to the point of discharge.
- (5) *Stormwater management plan.* The final stormwater management plan for the entire development shall include, but not be limited to, the following:
- a. All calculations, assumptions and criteria used in the design of the stormwater management facilities and control structures.
 - b. All plans and profiles of proposed storm sewers and open channels including horizontal and vertical controls, elevations, sizes, slopes and materials.
 - c. Location, dimensions and design details required for the construction of all facilities.
 - d. A description of the operation and maintenance needs for the stormwater management facilities.
 - e. All information relative to the design and operation of emergency spillways.
 - f. Project specifications relative to erosion and sedimentation control.
 - g. All deed restrictions, easements and rights-of-way.
 - h. The ownership and maintenance responsibilities for all stormwater management control structures during and after development. The identity of the responsible individual, corporation, association or other specific entity and the specific maintenance activities and schedule must be outlined on the plan.
 - i. Stormwater management and control devices shall be designed to minimize water quality impacts and shall attempt to maintain pre-development runoff conditions.
 - j. Project narrative and summary from existing conditions to proposed conditions showing that applicable Ordinances are met.
- (6) *Exemptions.* Exemptions from the stormwater management requirements contained herein shall be granted to the following:

- a. Land-disturbing activities on property used for agricultural, horticultural or botanical production of plants and animals useful to man, including but not limited to: forages and sod crops, grains and feed crops, tobacco, cotton and peanuts; dairy animals and dairy products; poultry and poultry products; livestock, including beef cattle, sheep, swine, horses, ponies, mules or goats, including the breeding and grazing of these animals; bees; fur animals and aquaculture, except that the construction of a structure used for agricultural purposes of one or more acres, such as broiler houses, machine sheds, repair shops and other major buildings and which require the issuance of a building permit shall require the submittal and approval of a stormwater management plan prior to the start of the land-disturbing activity.
- b. Land-disturbing activities undertaken on forestland for the production and harvesting of timber and timber products.
- c. Minor land-disturbing activities such as residential gardens, individual residential or commercial landscaping, minor home repairs, or maintenance work, and construction or maintenance of individual underground utility connections.
- d. Activities undertaken by local governments or special purpose or public service districts relating to the emergency repair and maintenance of existing facilities and structures. These activities will be carried out using appropriate best management practices to minimize the impact on the environment and surrounding properties.
- e. Any nonresidential development for which the area paved and under roof is less than 10,000 square feet.
- f. Waivers may also be granted if, in other cases, the developer can provide sufficient documentation that the proposed development will not result in an adverse impact either upstream or downstream of the proposed site. Waivers shall be granted solely at the discretion of the City Engineer, based upon interpretation of the documentation presented by the developer in conjunction with his or her knowledge of the relationship of the proposed development to the adjacent property.

(7) *Design certification.* Design of all stormwater management, conveyance facilities and water quality control structures shall be prepared and stamped by a licensed professional engineer (Kentucky registration required).

(8) *Construction certification.* Prior to final approval of the development, the licensed professional engineer must submit certification that the stormwater management, conveyance facilities and water quality control structures were constructed in accordance with the approved plan. Final approval shall also provide evidence of the recording of all stormwater conveyance, management, and water quality facilities deed restrictions, easements and rights-of-way. Any request for deviation from the approved plan during construction shall be submitted to the City Engineer in writing for approval.

(9) *Ownership, operation and maintenance of stormwater management facilities.* For all developments requiring stormwater management facilities, ownership and maintenance responsibilities remain with the property owner/developer. The Stormwater Management/BMP Facilities Long-term Maintenance Agreement must be signed, notarized, and submitted with the stormwater quality management plan.

Sec. VI. Stormwater quality control structures design criteria.

The following criteria shall control when designing stormwater quality control structures:

(1) *Water Quality Control Structures.* In addition to carrying pollutants, stormwater runoff from developed areas increases the frequency and duration of full-bank flows in the receiving streams, causing increased erosion of the stream banks and further degradation of in-stream water quality, on-site infiltration, designed for the increased runoff due to development, is the preferred solution to this impact. A water quality control facility must capture and treat the 80th percentile rainfall event “first flush”, or the runoff volume corresponding with a 0.61 - inch rainfall event. The water quality volume for sizing green infrastructure BMPs shall be computed as follows:

$$R_v = 0.009(I) + 0.05$$

Where:

R_v = volumetric runoff coefficient; and

I = the percent imperviousness of the drainage area.

$$WQ_v = 3,630 \times R_v \times P \times A$$

Where:

3,630 = conversion factor from acre - inches to cubic feet

WQ_v = water quality volume (ft³)

R_v = volumetric runoff coefficient;

P = rainfall depth associated with the 80th percentile precipitation event (in.), equivalent to a rainfall event of 0.61 inches; and

A = drainage area to BMP (acres).

(2) *Stormwater quality plan.* The final stormwater quality plan for the entire development shall include, but not be limited to, the following:

- a. All calculations, assumptions and criteria used in the design of the stormwater quality control structures.
- b. Location, dimensions and design details required for the construction of all facilities.
- c. A description of the operation and maintenance needs for the stormwater quality control structures.
- d. All deed restrictions, easements and rights-of-way.
- e. The ownership and maintenance responsibilities for all stormwater quality control structures during and after development. The identity of the responsible individual, corporation, association or other specific entity and the specific maintenance activities and schedule must be outlined on the plan.

f. Stormwater quality management facilities shall be designed to effectively treat the required amount of water quality runoff volume for the developed site.

g. Project narrative and summary from existing conditions to proposed conditions showing that applicable Ordinances are met.

(3) *Design certification.* Design of all stormwater quality facilities shall be prepared and stamped by a licensed professional engineer (Kentucky registration required). Design methods shall be in accordance with the Kentucky Department of Highways' Manual of Instructions for Drainage Design, latest edition and City of Madisonville Standards Guidance for Development.

(4) *Construction certification.* Prior to final approval of the development, the licensed professional engineer must submit certification that the stormwater quality control structures were constructed in accordance with the approved plan. Final approval shall also provide evidence of the recording of all stormwater conveyance, management, and water quality facilities deed restrictions, easements and rights-of-way. Any request for deviation from the approved plan during construction shall be submitted to the City Engineer in writing for approval.

(5) *Ownership, operation and maintenance of stormwater control and water quality management facilities.* For all developments requiring stormwater control and water quality management facilities, ownership and maintenance responsibilities remain with the property owner/developer. The Stormwater Management/BMP Facilities Long-term Maintenance Agreement must be signed, notarized, and submitted with the stormwater quality management plan.

(6) *Additional Treatment And Monitoring May Be Required.* The City reserves the right to require for new and redeveloped properties superseding or additional treatment criteria or objectives for specific pollutant(s) as necessary to meet overall stormwater quality management program objectives or directives under a watershed improvement or Total Maximum Daily Load (TMDL) program or KPDES/NPDES permit program as administered by the USEPA or Commonwealth of Kentucky.

(7) *Self Inspection Required.* The property owner shall provide annual self-inspection documentation for water quality management facilities as outlined in the Stormwater Management/BMP Facilities Agreement. The City Engineer or his/her designee will periodically inspect water quality management facilities for the purpose of identifying maintenance and structural deficiencies and if required proof of monitoring. If additional treatment and or monitoring is required, the property owner shall be fully responsible for monitoring their stormwater management and water quality facilities in accordance with the most recent directives under a watershed improvement or Total Maximum Daily Load Program or KPDES/NPDES permit program as administered by the USEPA or Commonwealth of Kentucky. In the event a deficiency is discovered a Notice of Violation will be issued and shall be enforced under the City of Madisonville Code of Ordinances.

(8) *In Lieu of Fee or Off Site Mitigation Program May Be Established.* The City of Madisonville Engineering Department may develop a payment-in-lieu program to allow property owners/developers make payment to the City in lieu of constructing stormwater quality management structures. The in lieu of fee funds shall be applied to public stormwater projects. Another option is to allow the property owner/developer to provide off site mitigation in the same watershed. Both of these options may be developed by the City of Madisonville Engineering Department following the permit requirements of the KPDES Permit For Small Municipal Separate Storm Sewer Systems..

Sec. VII. Issuance of certificate of occupancy.

No certificate of occupancy shall be issued for any development which is subject to the regulations of this article unless and until all requirements and criteria of this article are fully complied with.

Sec. VIII. Penalty.

Any person, firm, corporation or agency acting as principal, agent, employee or otherwise, who fails to comply with the provisions of this article shall be guilty of a misdemeanor and upon conviction thereof shall be punishable by a fine of not less than \$100.00 per day and not more than \$500.00 per day, or by imprisonment for not more than 90 days, or both, for each separate offense. Each day there is a violation of any part of this article shall constitute a separate offense.

SEVERABILITY. If any section, paragraph or provision of this Ordinance shall be held to be invalid or unenforceable for any reason, the invalidity or unenforceability of such section, paragraph or provision shall not affect any of the remaining provisions of this Ordinance.

CONFLICTS. All ordinances, resolutions, orders or parts thereof in conflict with the provisions of this Ordinance are, to the extent of such conflict, hereby repealed and the provisions of this Ordinance shall prevail and be given effect.

EFFECTIVE DATE. This Ordinance shall be read on two separate days and will become effective upon summary publication pursuant to KRS Chapter 424.

The foregoing Ordinance is read to and presented to a regular meeting of the City Council of Madisonville, Kentucky, for first reading on the 2nd day of December, 2019 and the second reading on the 16th day of December, 2019. Motion was made by , seconded by , that the Ordinance be adopted as the law of the City of Madisonville, Kentucky, to be effective upon publication, as required by law.

Upon vote being taken thereon, the votes were cast as follows:

It appearing that the Councilmembers voted the Mayor announced that the Motion was and that the above Ordinance would be published as required by law and would be effective as a new Ordinance of the City of Madisonville, Kentucky, immediately upon publication thereof, unless otherwise stated.

ORDINANCE O-2019-21**

**AN ORDINANCE AMENDING CHAPTER 160 OF THE CITY OF MADISONVILLE CODE OF
ORDINANCES RELATING TO EROSION PREVENTION AND SEDIMENT CONTROL
(EPSC)**

BE IT ORDAINED BY THE CITY OF MADISONVILLE, KY, AS FOLLOWS:

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MADISONVILLE, KENTUCKY AS
FOLLOWS:

Chapter 160 of the City of Madisonville Code of Ordinances is hereby amended as follows:

Section

160.01 Definitions

160.02 Introduction

160.03 Authority

160.04 Purpose

~~[160.05 Phasing of implementation]~~

160.06 Administration

160.07 Applicability

160.08 Exemptions

160.09 Permits

160.10 Application required

160.11 Review and acceptance

160.12 Erosion Prevention and Sediment Control Plan

160.13 Design Requirements

160.14 Inspection

§ 160.02 INTRODUCTION.

(A) In compliance with our National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) Phase II program, the city has created this chapter to provide a comprehensive stormwater management program. The requirements herein are applicable to all stormwater infrastructure owned or regulated by the city.

(B) During the construction process, soil is highly vulnerable to erosion by wind and water. Eroded soil endangers water resources by reducing water quality and causing the siltation of aquatic habitat for fish and other desirable species. Eroded soil also necessitates repair of sewers, ditches and the dredging of lakes. In addition, clearing and grading during construction cause the loss of native vegetation necessary for terrestrial and aquatic habitat.

(C) Construction site operators must implement appropriate erosion and sediment control (BMPS) that, at a minimum, shall be protective of Kentucky's General Permit for Stormwater Construction Site (KYR100000).

(Ord. 2006-26, passed 12-4-06)

§ 160.03 AUTHORITY.

Madisonville is empowered to regulate land use activities that affect stormwater runoff by the authority of Madisonville as a Municipal Separate Storm Sewer System under Phase II of the National Pollution Discharge Elimination System (NPDES) Stormwater Program of the Environmental Protection Agency (EPA). The city is empowered to regulate stormwater by the authority of the Clean Water Act, 33 U.S.C. § 1251, et seq. The City has the authority to receive and consider information submitted by the public related to erosion prevention and sediment control issues.

(Ord. 2006-26, passed 12-4-06)

~~§160.05 PHASING OF IMPLEMENTATION.~~

~~—(A) This section addresses the applicability of new procedurals and substantive standards enacted by this chapter to activities, actions, and other matters that are pending or occurring as of the effective date of this chapter.~~

~~—(B) Implementation schedule—completion of land alteration or development commenced or approved prior to the effective date of this chapter.~~

~~—(1) Buildings or developments with previously issued building permits or approved construction plans. Any building, structure, development, or land disturbing activity for which a valid building permit was issued or for which construction plans were approved prior to the effective date of this chapter shall be permitted to proceed with construction under the rules, regulations, and standards in effect at the time of the permitted activity. If construction is not completed within the time allowed under the original building or development permit, then the building or development shall be constructed only in compliance with all requirements of this chapter.~~

~~—(2) Buildings or developments with complete applications for construction plan approval. Any building, structure, development, or land disturbing activity for which a complete application for construction plan approval has been submitted prior to the effective date of this chapter shall be permitted to finish the approval process, and if approved, proceed according to the approved plans according to standards in place at the time of permit application. If construction is not completed within the time allowed under the original building or development permit, then the building or development shall be constructed only in compliance with all requirements of this chapter.~~

~~—(3) Developments or other activities with applications for approval pending. Any development or land disturbing activity that has submitted an application for a preliminary subdivision, development plan, conditional use, or any other type of land clearing/grading approval other than for construction plan approval, but for which no final action has been taken by the appropriate reviewing body on such application prior to the effective date of this chapter, shall be approved only if the development or land disturbing activity complies with all provisions of this chapter.~~
(Ord. 2006-26, passed 12-4-06)]

§ 160.07 APPLICABILITY.

~~[Subject to the exemptions set forth below,]~~ [t]The EPSC provisions of this chapter shall apply to all land disturbing activities undertaken in the city that disturb one acre or more, and land disturbing activities less than one acre in size that are part of a larger common plan of development or sale.
(Ord. 2006-26, passed 12-4-06)

§ 160.11 REVIEW AND ACCEPTANCE.

(A) Within ten (10) ~~[five (5)]~~ business days from the receipt of a complete permit application the city will review each permit application to determine its conformance with the provisions of this chapter. Acceptance indicates that minimum requirements or intent are met and does not imply a guarantee of performance. Based on the review of the permit application, the city will take one of the following actions:

§ 160.12 EROSION PREVENTION AND SEDIMENT CONTROL PLAN.

(A) The Erosion Prevention and Sediment Control (EPSC) Plan shall include the following:

(13) Construction site operators must control waste such as discarded building materials, concrete truck washout, chemicals, litter and sanitary waste at the construction site that may cause adverse impacts to water quality.

(14) Construction site operators shall implement appropriate erosion and sediment control BMPs that, at a minimum, shall be protective as Kentucky's General Permit for Stormwater Construction sites (KYR100000).

§ 160.13 DESIGN REQUIREMENTS.

(A) Any permitted land disturbance operation shall meet or exceed the design criteria set forth in Madisonville's most recent Standards and Guidance for Development Manual and the Madisonville Best Management Practices Manual, the provisions of which are incorporated herein by reference. ~~[meet the design criteria set forth in the most recent version of the manual, and shall be adequate to prevent erosion and control sediment from the site to the satisfaction of the city. Cut and fill slopes shall be no greater than 3:1, except as approved by the city to meet other community or environmental objectives.]~~

The foregoing Ordinance is read to and presented to a regular meeting of the City Council of Madisonville, Kentucky, for first reading on the 2nd day of December, 2019 and the second reading on the 16th day of December, 2019. Motion was made by , seconded by , that the Ordinance be adopted as the law of the City of Madisonville, Kentucky, to be effective upon publication, as required by law.

Upon vote being taken thereon, the votes were cast as follows:

It appearing that the Councilmembers voted the Mayor announced that the Motion was and that the above Ordinance would be published as required by law and would be effective as a new Ordinance of the City of Madisonville, Kentucky, immediately upon publication thereof, unless otherwise stated.

ORDINANCE O-2019-22**

AN ORDINANCE REPEALING SECTION 34.06 OF THE CITY OF MADISONVILLE CODE OF ORDINANCES RELATING TO THE PERSONNEL AND PAY CLASSIFICATION PLAN AND ADOPTING A NEW PERSONNEL AND PAY CLASSIFICATION PLAN

BE IT ORDAINED BY THE CITY OF MADISONVILLE, KY, AS FOLLOWS:

Section 34.06 of the City of Madisonville Code of Ordinances dated March 17, 2003 indexed as Ordinance 2003-07 (An Ordinance Amending Section 34.06 of the City of Madisonville Code of Ordinances relating to the personnel and pay classification plan) is hereby repealed in its entirety.

Whereas, Section 34.06 is being amended to adopt the authorized classes and assigned grades of City Personnel as follows:

NOW THEREFORE be it ordained by the City Council of the City of Madisonville adopt the new Personnel and Pay Classification Plan as follows:
